

YUKIS WATER

Continuous H₂O to go

*We believe that we can slow down the effects of ageing
by reducing excessive oxidation in skin
through the use of Yukis Water.*

What is Yukis Water?

Yukis Water is generated by the blue stone catalyst in the bottom of the vessel. This patented catalyst generates a constant stream of hydrogen ions when emersed in water, giving Yukis Water its unique ability to remove the excess active oxygen from our bodies.

It has taken more than 30 years of development to create Yukis Water. The blue stone catalyst is made from a unique blend of mineral ores (purity 99.9% magnesium, silicon and other minerals).

About active hydrogen

Excessive active oxygen in the human body causes damage to cells in various organs, accelerates aging, and promotes disease. The active hydrogen in the Yukis Water combines with the active oxygen to form harmless water.

About active oxygen

We are constantly exposed to bacteria and viruses, and these disease-causing germs enter our bodies with every breath we take. When we are in perfect health, our immune system protects us from these germs. White blood cells, with the help of active oxygen, repulse the germs. Active oxygen helps to protect us if

kept in the right quantity. If there is an excessive amount of active oxygen in our body it reacts with other substances, lowering the functions of cells, damages DNA by oxidization, and has been linked with cancer.

Damage caused by active oxygen

Skin • Atopic Dermatitis • Skin Allergy • Ultraviolet damage

Aging Liver spots, wrinkles, dry skin, sagging, grey hair, thinning hair, fatigue, stiff shoulders, muscle fatigue, lower back pain, arthritis, obesity and insomnia

Moisturising hair and skin

Hydroxyl ions react with melanin helping our skin to become clear (transparent) so freckles and liver spots will fade. The hydroxyl ion combines with active oxygen and prevents the creation of peroxide in fat helping to reduce the effects of ageing.

Hydroxyl ions have a mild affect on the surface-active agent by removing stained excess skin fats and leaving essential skin fats. So aiding in the creation of clear and beautiful skin.

How to apply

Spray a small amount of Yukis Water on your skin before applying make-up.

In winter, add a small amount of Yukis Water on cotton pads and wear as a lotion pack.

Afterwards apply oil* (such as olive or aloe). This will help your skin become softer. (If you apply everyday, your skin keratin will be fully removed)

*only use the oil that is not easily oxidized.

Instructions

Step 1 •

The stones should be washed with the water.

Step 2 •

The stones should then be placed into the glass vessel provided*.

Step 3 •

Fill the glass vessel with water up to 90 percent of its capacity.

Step 4 •

The water will be saturated with hydrogen in approximately 30 minutes.

Safety Notes:

* Do not place catalyst in vessel other than the one provided, the blue stone can react with plastic containers and the catalyst will absorb the smell of the plastic container contaminating the water. Do not rinse with detergent or any cleaning products. Do not eat blue stones. If the blue stones become white they have become encased in calcium and will no longer work, they should be replaced.
